5/11/81
version

BALLY BASIC CORRECTIONS

This basic version corrects the BUGS in the Print Command which cause unintentional program execution after immediate mode PRINT.
The simplest way of producing this bug is:

```
>10 STOP
>20 PRINT  "OOPS"
>RUN
>PRINT
 OOPS
```

Testors should verify that PRINT and INPUT work OK. The methode of clearing RAM on powerup has changed too.

Per Jay Fenton

To Fix Step problem
LOC 25BF$_X$ from OE$_X$ to OD$_X$

To Test
10 STEP Should give error message not reset program as before.
Also ~~test~~ 10 Print " " as it is next in table.

Please check these changes out and let me know ASAP
